

Invitation to a seminar on genetic diversity the 10th of March 2019 in Copenhagen, Denmark.

Workshop by Coen Huisman and Linda van Andel, where we will work with and discuss matters about the use of the tool of mean kinship in regard to the practical breeding planning.

Several statements and breeding combinations will be assigned to and discussed in groups, to get a better grip on and feel for the theory of genetic diversity, and how we can put it into practice

Coen Huisman and Linda van Andel will do the introductions of the assignments to the groups and lead the plenary discussions in English.

Coen Huisman and Linda van Andel have been fond of the Icelandic Sheepdog from the moment they first came in contact with this breed. After a long time of waiting, Elska came home in the summer of 2013. Soon they got their second dog Ylfa in the summer of 2015. The third Icelandic Sheepdog came in November of 2016. In 2016 they started to breed and had their first litter with Elska. Together they have been engaged in the work with genetic diversity and have established their own database with mean kinship calculations concerning the Icelandic sheepdog breed. Over the past two years they have conducted more international workshops on the subject.

Place and time:

Place: DKK (The Danish Kennel Club), Parkvej 1, 2680 Solrød Strand.

Time: 10-16.

Price and signing up for the 10th:
